**INTRODUCTION**

1.1. This report presents results on household consumer expenditure based on the Integrated household schedule of NSS 24th round.\*

1.2. The field work of Twentyfourth round started in July 1969 and continued upto June 1970 covering a period of one complete year. Data relating to household purchase and consumption for non-productive domestic purposes were collected in blocks 5-8 of the Integrated household schedule. In block 9, summary of consumer expenditure was recorded from blocks 5-8. The reference period of collection of data for these blocks was 30 days preceding the date of survey. This report is based on data of the summary block.

1.3. The survey extended over the whole of the rural and urban areas of the Indian Union excepting North-East Frontier Agency, Ladak district of Jammu and Kashmir state, Mizo Hills district in Assam, Pal and Sumar tehsils of district Surguja and Bijapur, Dantewara and Konta tehsils of district Bastar of Madhya Pradesh, rural areas in Nagaland, Mao, Ukhrul and Tame-long sub-divisions of Manipur, the Union Territories of Andaman and Nicobar Islands and Laccadive, Minicoy and Amindivi Islands.

1.4. The field work was undertaken by the Directorate of National Sample Survey in all the states and Union Territories excepting West Bengal and Bombay City where Indian Statistical Institute collected the data.

1.5. In the NSS 24th round all the state Governments except that of West Bengal participated in the work of procedures on similar sample in their respective states. Both the reorganised states of Punjab and Haryana were among the participating states. Among the Union Territories only Manipur and Tripura participated on full matching basis.

1.6. Besides 'Introduction', there are four other sections in the report. In section two and three, some important concepts used in the enquiry on consumer expenditure and explanatory notes on the tables are presented. Section four deals with some findings of the survey. Sample design and estimation procedure have been noted in section five.

1.7. Appendix I of this report contains detailed tables for each of the states and union territories for rural and urban. Tables for All India and union territories pooled, and for four big cities—Bombay, Calcutta, Delhi and Madras—separately and combined have also been presented.

---

\*The report (NSS D 271) was submitted in April 1976.

**1.8. The following tables have been presented in the report :**

TABLE (1)—Distribution of sample households by monthly per capita expenditure classes

TABLE (2)—Percentage (0.00) distribution of estimated number of households by monthly per capita expenditure classes

TABLE (3)—Percentage (0.00) distribution of estimated number of persons by monthly per capita expenditure classes

TABLE (4)—Average number (0.00) of persons per household by monthly per capita expenditure classes

TABLE (5)—Consumer expenditure in rupees (0.00) per person for a period of 30 days by broad groups of items of consumption and by monthly per capita expenditure classes

TABLE (6)—Percentage (0.00) of consumer expenditure to total consumer expenditure by broad groups of items of consumption and by monthly per capita expenditure classes

1.9. The following system has been adopted in numbering the tables. The left hand most digits refer to the table number listed above. The digits following the first point from left stand for individual state and union territory which were first arranged in alphabetic order of their names and were assigned serial numbers in that order. The alphabet 'R' at the end stands rural. Similarly 'U' will mean Urban and  $C_1$ ,  $C_2$ ,  $C_3$  and  $C_4$  the four big cities—Bombay, Calcutta, Delhi and Madras.

## SECTION TWO

### CONCEPTS AND DEFINITIONS

2.1. Some of the important concepts and definitions followed in NSS 24th round consumer expenditure survey are noted below :

2.2. *Household* : A household is a group of persons normally living together and taking food from a common Kitchen. A boarding house, a hotel or a hostel is treated as a cluster of households, where each individual boarder (with his dependents or guests) forms a separate household. Households maintained and fed directly by government such as those in prisons, police quarters, cantonments, hospitals, relief camps are, however, excluded from the scope of the enquiry.

2.3. *Household member* : Any person who takes principal meal with the household for at least 16 days during a period of 30 days preceding the date of enquiry is considered to be a member of the household. Such a person may be the head of the household or a relation or protege of the head or an employee or a guest of the household.

2.4. *Household Size* : The number of members (as defined above) in a household gives the household size.

2.5. *Household Consumer expenditure* : Consumer expenditure of a household comprises all expenditure incurred by the household during a reference period of 30 days preceding the date of survey exclusively towards its non-productive domestic consumption. Thus all expenses towards the enterprise activities of the household are excluded. Transfer payments in kind like loans advanced, charities, gifts and other payments in kind if any is not considered as consumer expenditure. But any consumption out of transfer receipts in kind like borrowings, gifts, charities, perquisites received by the household, free collections and other receipts in kind if any is considered for determining total consumption of the household.

**SECTION FIVE**  
**SOME FINDINGS**

4.1. The average household size for rural and urban are 5.16 and 4.66 respectively in NSS 24th round. As expected the household size generally decreases with the rise in expenditure level barring a few expenditure classes at the bottom. Compared to the results of NSS 23rd round, the household size in NSS 24th round is slightly lower both in rural and urban areas.

4.2. In column (9) and (12) of the table (A) are given the proportions of estimated number of households for each per capita expenditure class. In rural areas 25.76 percent of households report in the expenditure class of Rs. 43/- and above.

The corresponding proportion in the urban area is 53.26 percent. In the lower per capita expenditure group of Rs. 21/- and below the proportions of households are 21.58 and 8.08 in rural and urban respectively.

4.3. A comparative study of proportion of households in the different expenditure classes for NSS 23rd to 25th rounds shows a similar pattern of distribution in rural and urban areas as can be seen from Table (B).

There is a declining trend in the proportion of households in the lower expenditure class of Rs. 21 and below whereas an opposite trend is observed in the higher expenditure classes of Rs. 43 and above. The proportion remains steady in the middle expenditure group (Rs. 21-43).

4.4. In table (C) the consumer expenditure per person per month on food and non-food items and the percentage of expenditure on food to total expenditure in rural and urban areas and in four big cities are shown for NSS 23rd to NSS 25th rounds. It is observed that there is an increase in consumer expenditure in both food and non-food items over the rounds. Also food as percentage to total expenditure has recorded progressive fall, though very small in both rural and urban areas.

4.5. Table (D) gives the state-wise estimates of average household size and total consumer expenditure per person per month. It is seen from the estimates that the highest average household size is recorded by Punjab (5.75) and the lowest by Tamil Nadu (4.37) in the rural area. In the urban sector Jammu & Kashmir reports the highest average household size (5.91) and Nagaland the lowest (3.08). With regard to per capita total consumer expenditure Haryana (54.05) tops the list in rural area. The corresponding figures in urban is found to be 82.83 in Nagaland. The lowest in the scale in rural and urban are Orissa (28.70) and Jammu & Kashmir (40.62) respectively.

## SECTION FIVE

### SAMPLE DESIGN AND ESTIMATION PROCEDURE

5.1. *Sample Design* : The general sample design in the NSS twentyfourth round was stratified with two-stage selection within each stratum; the first stage units were villages/blocks in the rural/urban areas and the second stage units the households for the socio-economic survey. The sample design had been made self-weighting for sub-strata 1 and 2 of the Integrated Household Schedule at state level both in rural and urban areas.

5.2. *Sample Size (Central Sample)* : The total sample size for socio-economic enquiries in the rural area was 8400 sample villages and in the urban area the size was 4632 sample blocks.

5.3. *Work Programme* : The survey period (one year) of this round was divided into six sub-rounds of two months each for both the rural and the urban areas. In each sub-sample of a rural stratum, the 6 sample villages were numbered from 1 to 6. Similarly, the urban blocks within each sub-sample of an urban stratum were serially numbered from 1. Each sample village and block was visited and surveyed only once for socio-economic enquiries in the whole round according to a specified programme.

#### RURAL SAMPLE DESIGN

5.4. *Sampling Frame* : The frame used for selection was the list of villages as per 1961 population census.

5.5. *Stratification* : The country had been divided into 64 regions by grouping, within each State or Union Territory, contiguous districts having similar population density and crop pattern. Strata were formed within each region by grouping contiguous tehsils having similar population densities and altitudes and having good transport and communication facilities amongst them, as far as possible. Formation of strata was such that the sum of the size measures of the villages for each stratum in a State/Union Territory was the same.

5.6. *Allocation* : The allocation of the total sample size to the states was based on a joint considerations of their rural population, area under cereal crops and investigators available. This allocation was modified to (i) ensure a minimum sample size of 360 villages in each state with the exception of Punjab and Haryana where there were only 193 and 144 sample villages respectively and about 200 sample villages in the Union Territories of Manipur and Tripura and (ii) to make them multiples of 24 to facilitate having 24 villages per stratum.

5.7. *Selection of villages* : In each stratum four independent sub-samples of 12 villages each were selected circular systematically with probability proportional to size. In each sub-sample the villages with odd orders of selection formed the central sample.

5.8. *Selection of households* : The households of a sample village were divided into two sub-strata on the basis of land possessed by them. Sub-stratum 1 was formed of households whose land possessed exceeded a certain limit (which varied from one state to another) and sub-stratum 2 was formed of the remaining households. Further, the households of sub-stratum 2 were arranged in two classes viz., self-employed in non-agriculture and others. Then a sample of households was selected linear systematically with specified interval and random start in each sub-stratum.

#### URBAN SAMPLE DESIGN

5.9. *Sampling frame* : The list of Urban Frame Survey (UFS) blocks and the list of 1961 census enumeration blocks had been used as the sampling frame.

5.10. *Stratification* : In each State/Union Territory, towns with population less than 50,000 formed stratum 1 and the remaining towns and cities formed stratum 2 except the four big cities Bombay, Calcutta, Delhi and Madras. Each one of these big cities formed stratum 3 of its respective state.

5.11. *Allocation* : The total sample size had been allocated to the states in proportion to their 1961 census urban population with some necessary adjustment.

5.12. *Selection of blocks* : After arranging the blocks in a stratum for a state the blocks within each stratum had been selected circular systematically with probability proportional to size.

5.13. *Selection of households* : The households of a sample block were divided into two sub-strata on the basis of household monthly total consumer expenditure. In each sub-stratum, households were sampled linear systematically using specified interval and random start.

5.14. *Estimation procedure* :

s : subscript for  $s^{\text{th}}$  stratum

t : subscript for  $t^{\text{th}}$  sub-stratum within a village/block

i : subscript for  $i^{\text{th}}$  sample village/block

j : subscript for  $j^{\text{th}}$  sample household

k : number of strata in the state

$n_s$  : number of sample villages/blocks in a sub-sample of  $s^{\text{th}}$  rural/urban stratum for the whole round

h : number of households selected for the enquiry

y : value of the characteristic

$Y$ , the estimate of the state total for the characteristic in the Integrated household schedule from a sub-sample for the whole round, is expressed as :

for rural areas :

$$Y = \sum_{t=1}^2 M_t \sum_{s=1}^k \sum_{i=1}^6 \sum_{j=1}^{hsit} Y_{s,itj}$$

$$= M_1 y_1 + M_2 y_2$$

where  $M_t$  is the constant multiplier for the Integrated household schedule and  $t^{\text{th}}$  sub-stratum; and  $y_t$  is the sample total for all sample households in the state belonging to sub-stratum  $t$ .

for urban areas :

$$Y = \sum_{t=1}^2 M_t \sum_{s=1}^k \sum_{i=1}^{ns} \sum_{j=1}^{hsit} Y_{s,itj}$$

where  $M_t$  and  $y_t$  have the same meaning as mentioned above.
